Introduction to Information Technology (IT)

Changing Times. . .

What is ICT?

Information & Communication Technology is the integration of *computing and communication technology and information processing.*

Technology Revolution

- **How personal computers affect us today:**
 - **At work (mobile computing)**
 - **At home (Internet)**
 - **At play (e-mail, chat, newsgroups, games)**

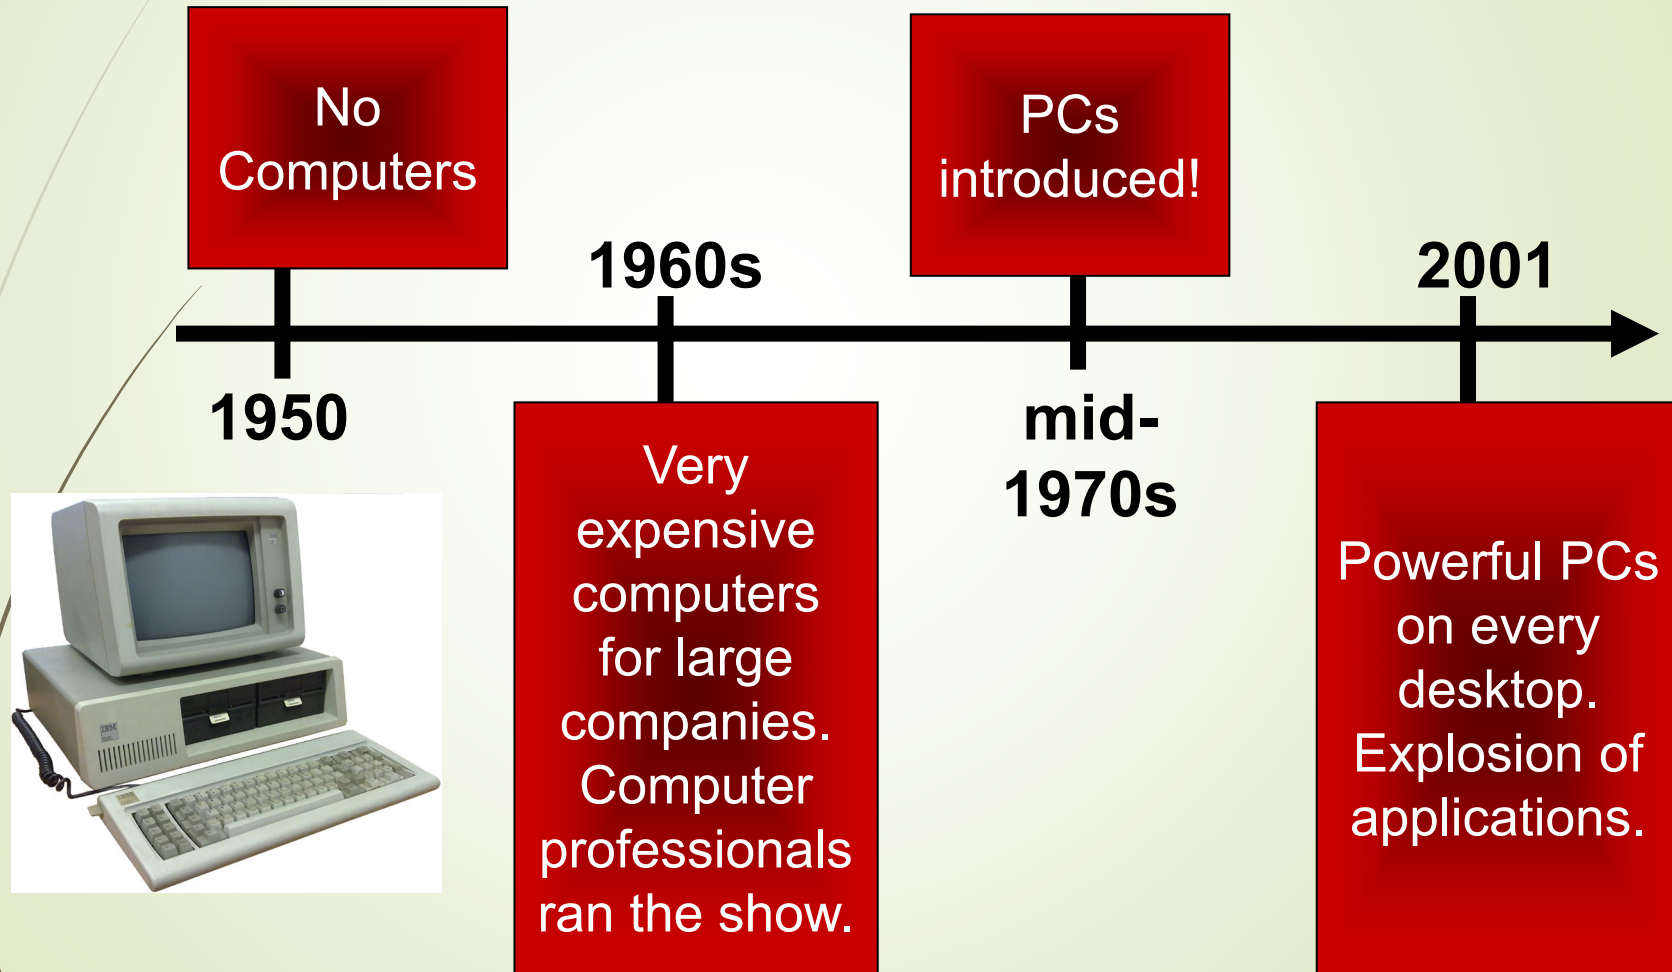

Technology Revolution

- Virtual house tours
- On-line voting
- Telemedicine
- Cashless society
- E-commerce

Information Superhighway

Evolution of Computing

Data vs. Information

Data

Information

Knowledge

An American was travelling in Afghanistan when his Mercedes jammed. He did everything, but it didn't start. Finally, a mechanic came from the hills riding a donkey. He opened the bonnet and hit the cylinder head six times. He asked the American to start it and it did. The American asked, "How much?" The mechanic said, "\$100." On being asked to itemise it, the mechanic said, 10 cent for hitting six times and \$99.90 for knowing where to hit." The American paid sheepishly.

Computer Systems Basics

Handheld Computers

Notebook PCs

Desktop PCs

Thin Client Computers

Workstations

Server Computers

Supercomputers

Computing Power is the key!

Notebook PCs (Laptops)

Desktop PCs

- **System unit**
 - **Tower**
 - **Footprint**
- **Multimedia applications**

- **Configuration**
 - Motherboard
 - Keyboard
 - Point-and-draw device
 - Monitor
 - Printer
 - Hard disk
 - Floppy disk drive
 - Optical disk drive
 - Microphone
 - Speakers

Handheld Computers

- Palmtop PC
- Personal digital assistants (PDAs)
- Pen-based computers (UPS)
- Connected organizers
- Personal communicators
- Mobile phones
- Smart phones

How Thin Clients Differ From PCs

- Smaller processor
- Less RAM
- No hard disk
- Less expensive
- Depends on server

Workstations

"Souped-up PCs" for
"Power Users"

CAD

Client/Server Computing

- **Server**
 - From PC to Supercomputer
 - Data storage and applications software
- **Client**
 - PC, workstation or thin client
 - Requests processing or support from server
- **Applications Software**
- **Proxy server computer**

Supercomputers

- **Processor-bound applications**
- **100 times faster than typical server**
- **Used for**
 - **Scientific simulations and forecasting**
 - **Medicine**
 - **Advanced graphics**

Why Use Computers?

- **Speed**
- **Accuracy**
- **Consistency**
- **Reliability**
- **Communications**
- **Memory**
