Assignment 2

Title: Cyber attack trends and where our focus should be.

Marks %: 3

Attack trends may differ from year to year and country to country. Your task is to investigate the trends of cyber attacks to all computer users in Malaysia. You may compare it to the world, but **your focus must be on Malaysia**. In your group, prepare an article for a computer magazine with the above title (****Note: *You may tweak the title to make it interesting, but don't go away from the intended content*).

In your article, you must have the following features, although this is a guideline. Give it your best, as the content will be part of your tests in the future.

- A review of trends
- Classification of most important or urgent trends
- What should be done, how and by whom
- Don't forget references and citation.

Do not only take the suggested features as your topics, that is of poor taste. Be thorough. Marks will be awarded based on **content**, **critical analysis of data and information**, **creative writing** and **overall appeal**. The Just-Credit System is in effect.

Please submit the article to the e-learning site. Remember to have your members name in the by-line of the article.

Mindset for assignment: I want to discover, analyse and share knowledge.

Assignment due: 20 September 2016, before 9.00am (system time).
