

Title	Year	Journal Name, Vol(), pages	Author	Summary
Gamma rays following muon capture Label: <b>HJEvan1973</b>	1973	Nuclear Physics A (207) 379- 400	H.J.Evans	<p><u>Introduction/ Theory:</u></p> <p>The energy and intensity of <math>\gamma</math>-rays following capture of muons by Si, Ti, Mn, Fe, Co, Ni, Y, Ag and Au were measured.</p> <p>MuCAP on Fe &amp; Ni =&gt; mode of de-excitation by the emission of neutron and proton</p> <p>MuCAP on Ti =&gt; g-rays mode alone</p> <p>if <math>\mu</math> and p are at rest (<math>BE_p \sim</math> negligible) leads to neutron KE <math>\sim</math>5.2 MeV</p> <p>Prompt gamma (gate =15 ns)</p> <p>Delayed gamma (gate =100 ns)</p> <p>Gamma absolute intensities:</p> <p>Lyman Series =&gt; corresponds to each muon stopped</p> <p>Balmer series =&gt; total 2p-1s transition</p> <p><u>Aims:</u></p> <p><u>Method:</u></p>

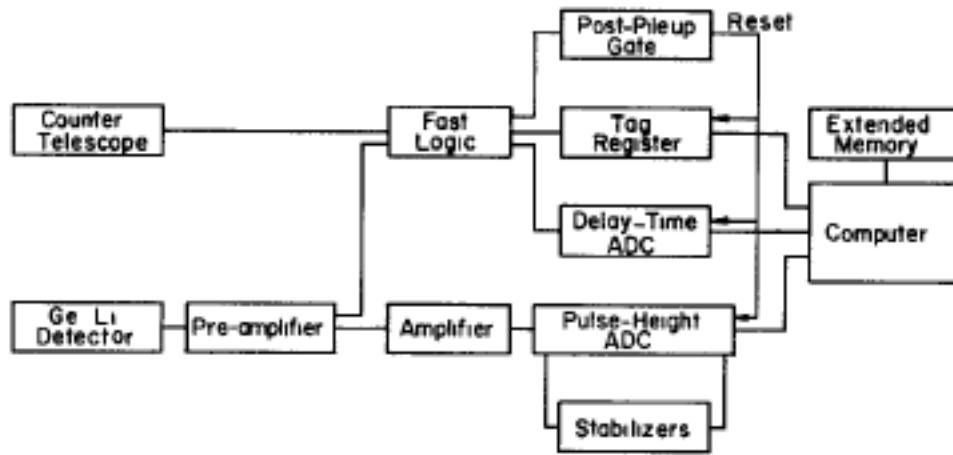

Fig. 1. A block diagram of the experimental set-up.

Isotopic distribution of elements used as targets					
Target element	Isotopic mass	Relative abundance (%)	Target element	Isotopic mass	Relative abundance (%)
Si	28	92.2	Co	59	100
	29	4.7		58	67.8
	30	3.1		60	26.2
Ti	46	8.0	Ni	61	1.3
	47	7.3		62	3.7
	48	74.0		64	1.2
	49	5.5	Y	89	100
	50	5.2		107	51.35
Mn	55	100	Ag	109	48.65
Fe	54	5.8		197	100
	56	91.7			
	57	2.2			
	58	0.3			

The values in this table were taken from ref. <sup>21</sup>).

Results:				
	Nuclei	Neutron	$\gamma$ -rays (keV)	Probability (%)
$^{28}\text{Si}$	0n	-	-	-
	1n	844.0, 1014.0	17.0	
	2n	-	-	-
$^{48}\text{Ti}$	0n	121.4, 130.9, 370.3, 520.3, 780.1	11.1	
	1n	583.1, 807.8	13.0	
	2n	146.9, 216.6, 227.9	8.1	
	3n	364.2, 719.9	5.2	
$^{55}\text{Mn}$	0n	-	-	-
	1n	834.8, 989.0	49.0	
	2n	1006.0	4.0
