

## Stadthafen Schleswig

**Location:** Schleswig, Germany **Designer:** BHF-Landscape Architects  
**Photographer:** BHF-Landscape Architects **Completion date:** 2007 **Site area:** 10,000 sqm

1. Lawn
2. Bench
3. Car Parking
4. New Pavement
5. Parking Area for Mobile Homes

The office BHF-Landscape Architects received the direct contract for the re-designing of the promenade (approx. 200 metres long), the area around the harbour gastronomy, the parking area for mobile homes, and a central square at the harbour head. The town harbour is the central home-port for luxurious yachts of the brand "Comfortina".

The promenade along the town harbour in Schleswig was completely redesigned following a renovation of the quay wall. The quay wall received a broad flat head of in-situ concrete. In addition lies a double band of granite paving stones

The existing shed has been converted into a fish snack with numerous outdoor seats. To protect the shed against floods, the built-in under the shed roof containers were placed on a pedestal, which was enclosed with large size ashlar of fair-faced concrete. Here people can wind-protected sit and look at the fjord.

The shipping buoy in the harbour apron was installed on the top of a small grass hill. Despite the small difference in height of one metre, can be seen from here even better the bustle of the harbour. Here to the waterside fair-faced concrete ashlar were also built as the seat blocks. In the appropriate steps flat LED lights are integrated.
