

Archery Sports Development

INTRODUCTION

Archery is one of the recreational activities promoted by our Prophet Muhammad SAW. The Prophet encourages Muslims to master archery sports besides horse riding and swimming. Archery is suitable for all ages as this sport does not require a person to have a body shape, but requires only a degree of concentration, focus, good body balance, and high patience. This sports trains people to calm down and stabilize emotions in any sports field that is involved.

Objective

Develop and attract archery sports to primary, secondary and university students

Problem Statement

The level of Malaysian society knowledge of archery sports is still low, archery known as an elite sports and are concentrated only on urban people.

ARCHERY

There are two types of archery sports that are popular among students i.e. recurve and compound types. However there are still other types like long bow, traditional bow and cross bow. Currently, only recurve types are developed for this time as these recurve types are contested in MSSM and the Olympics.

Recurve Bow

Compound Bow

RECURVE AND COMPOUND

Japanese Archery
- Also known as "Kyudo"
- Uses "Yumi" which is a bow made of bamboo and leather.
- The archer will wear a glove called as "Yugake" to protect their hands.

Arabian Archery
- Uses thumb draw technique
- Uses thumb ring to protect the thumb.
- Uses a composite bow made from horn and wood.

Malayan Archery
- The bow is heaily inspired by the Ottoman Empire.
The archer is usually riding horse for mobility.

TRADITIONAL ARCHERY

The name "recurve" comes from the shape of the bow's frame. Large recurve bows, depending on the draw, can fire several hundred yards at an arc. The required effort to draw an arrow and hold it in place while aiming depends entirely on the size of the bow.

Compound bows are the modern cousin of the recurve, and have become very popular in recent decades, both for hunting and shooting. Compounds use a pulley system that takes strain off of the bow and provides slack for the archer, making it easier to shoot with accuracy.

Traditional bows are beautiful and shooting them is an organic experience because there are no gadgets to interrupt the flow of your shooting. While it is easier to be accurate with a compound bow, traditional bows offer a lot of fun in exchange for immediate accuracy.
