

A close-up photograph of a red pencil with a white eraser and a sharpened lead tip. The pencil is positioned vertically on the right side of the frame, with its tip touching a white surface. The word "ANGER" is written in red ink on the surface, extending from the left towards the pencil. The pencil has just finished writing the letter 'R', and there are small red shavings and smudges around the tip. The background is a plain, light-colored surface.

ANGER

*Anger is an acid that does more harm to the vessel in which it is stored rather than to the person on whom it is poured.*
