

# Project Management

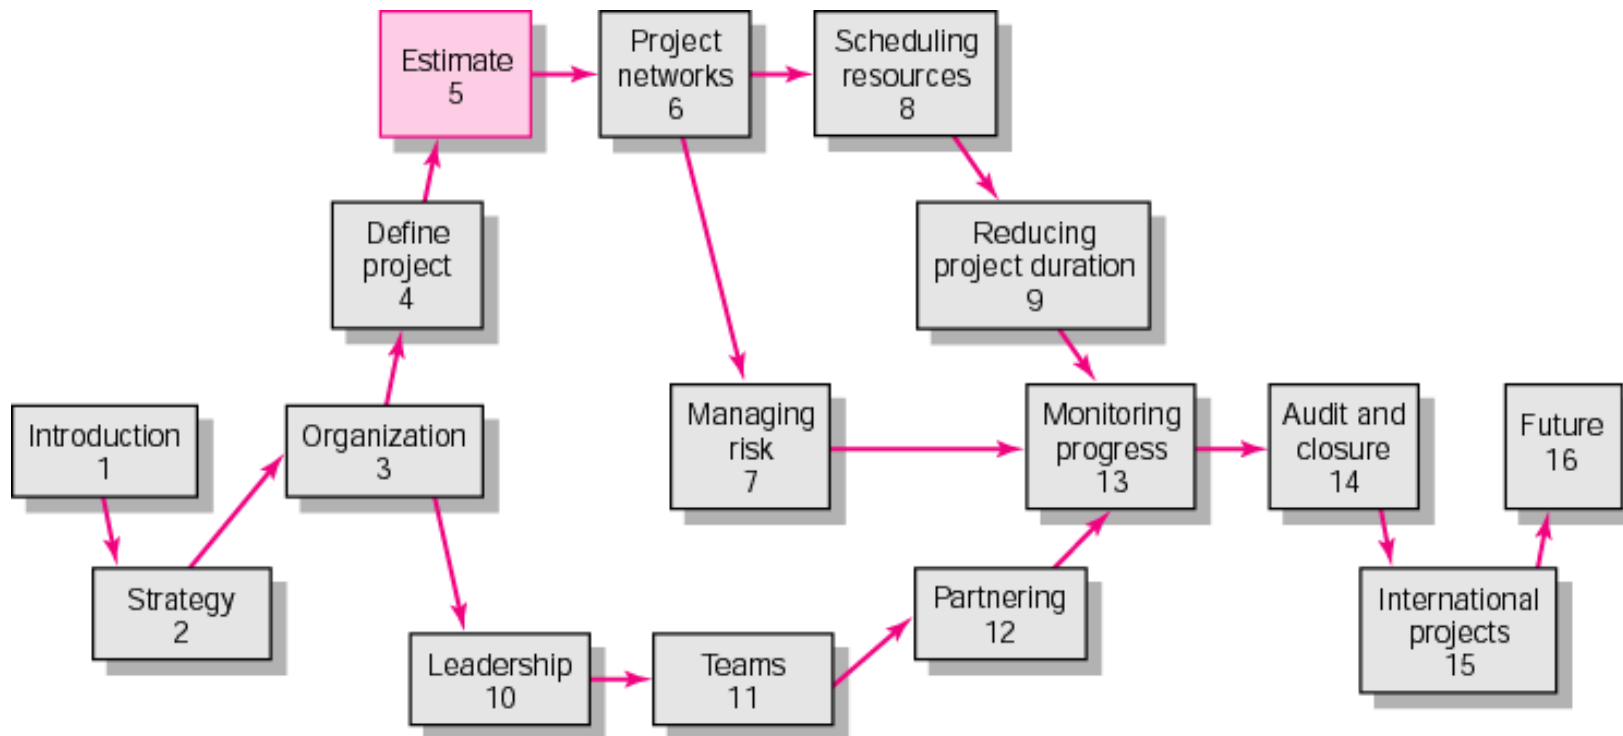

THE MANAGERIAL PROCESS

Clifford F. Gray  
Eric W. Larson  
Third Edition

## Chapter 5

# Estimating Project Times and Costs

# Estimating Projects

- Estimating

- The process of forecasting or approximating the time and cost of completing project deliverables.
- The task of balancing the expectations of stakeholders and the need for control while the project is implemented

- Types of Estimates

- Top-down (macro) estimates: analogy, group consensus, or mathematical relationships
- Bottom-up (micro) estimates: estimates of elements of the work breakdown structure

# Why Estimating Time and Cost Are Important

- Estimates are needed to support good decisions.
- Estimates are needed to schedule work.
- Estimates are needed to determine how long the project should take and its cost.
- Estimates are needed to determine whether the project is worth doing.
- Estimates are needed to develop cash flow needs.
- Estimates are needed to determine how well the project is progressing.
- Estimates are needed to develop time-phased budgets and establish the project baseline.

EXHIBIT 5.1

# Factors Influencing the Quality of Estimates

# Estimating Guidelines for Times, Costs, and Resources

1. Have people familiar with the tasks make the estimate.
2. Use several people to make estimates.
3. Base estimates on normal conditions, efficient methods, and a normal level of resources.
4. Use consistent time units in estimating task times.
5. Treat each task as independent, don't aggregate.
6. Don't make allowances for contingencies.
7. Adding a risk assessment helps avoid surprises to stakeholders.

# Macro versus Micro Estimating

## Conditions for Preferring Top-Down or Bottom-up Time and Cost Estimates

Condition	Macro Estimates	Micro Estimates
Strategic decision making	X	
Cost and time important		X
High uncertainty	X	
Internal, small project	X	
Fixed-price contract		X
Customer wants details		X
Unstable scope	X	

**TABLE 5.1**

# Estimating Projects: Preferred Approach

- Make rough top-down estimates.
- Develop the WBS/OBS.
- Make bottom-up estimates.
- Develop schedules and budgets.
- Reconcile differences between top-down and bottom-up estimates

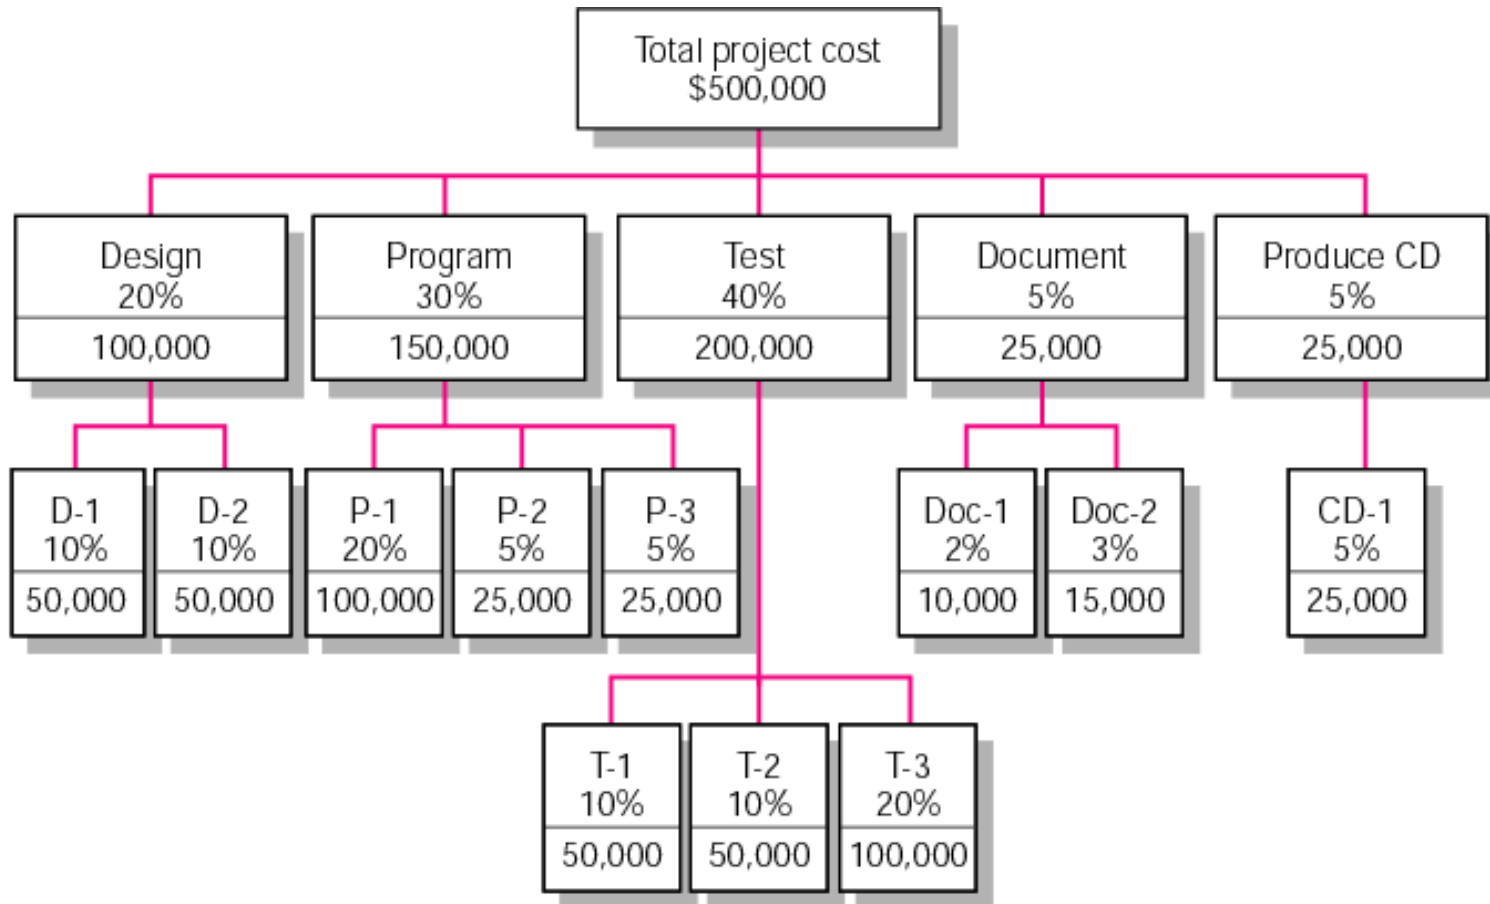

# Methods for Estimating Project Times and Costs

- Macro (Top-down) Approaches
  - Consensus methods
  - Ratio methods
  - Apportion method
  - Function point methods for software and system projects
  - Learning curves

# Apportion Method of Allocating Project Costs Using the Work Breakdown Structure

**FIGURE 5.1**

# Simplified Basic Function Point Count Process for a Prospective Project or Deliverable

Element	Complexity Weighting			Total
	Low	Average	High	
Number of <i>inputs</i>	_____ × 2 +	_____ × 3 +	_____ × 4	= _____
Number of <i>outputs</i>	_____ × 3 +	_____ × 6 +	_____ × 9	= _____
Number of <i>inquiries</i>	_____ × 2 +	_____ × 4 +	_____ × 6	= _____
Number of <i>files</i>	_____ × 5 +	_____ × 8 +	_____ × 12	= _____
Number of <i>interfaces</i>	_____ × 5 +	_____ × 10 +	_____ × 15	= _____

**TABLE 5.2**

# Example: Function Point Count Method

## Software Project 13: Patient Admitting and Billing

15	Inputs	Rated complexity as low	(2)
5	Outputs	Rated complexity as average	(6)
10	Inquiries	Rated complexity as average	(4)
30	Files	Rated complexity as high	(12)
20	Interfaces	Rated complexity as average	(10)

## Application of Complexity Factor

Element	Count	Low	Average	High	Total
Inputs	15	× 2			= 30
Outputs	5		× 6		= 30
Inquiries	10		× 4		= 40
Files	30			× 12	= 360
Interfaces	20		× 10		= 200
				Total	<u>660</u>

104	R/W Property Acceptances		44	48	52	45	50	52	43	46	49	44.0	48.0	51.0	0.15
105	Base Maps		36	38	40	36	37	39	35	36	37	35.7	37.0	38.7	0.08
106	Coordinate Utilities		7	8	9	7	8	9	8	9	10	7.3	8.3	9.3	0.24
107	EPA Acceptance		13	14	15	14	15	16	13	15	17	13.3	14.7	16.0	0.18
108	Alignment Surveys		32	35	38	32	35	37	32	34	35	32.0	34.7	36.7	0.13
			* Note: = ABS (Average Low - Average High)/Average												
			This ratio indicates the degree of variability in the estimates												

**FIGURE 5.2**

# Phase Estimating over Product Life Cycle

Phase	Need 1	Specifications 2	Design 3	Produce 4	Deliver 5
1		Macro estimate			
2		Detailed estimate	Macro estimate		
3			Detailed estimate	Macro estimate	
4				Detailed estimate	Macro estimate
5					Detailed estimate

**FIGURE 5.3**

# Level of Detail

- Level of detail is different for different levels of management.
- Level of detail in the WBS varies with the complexity of the project.
- Excessive detail is costly.
  - Fosters a focus on departmental outcomes
  - Creates unproductive paperwork
- Insufficient detail is costly.
  - Lack of focus on goals
  - Wasted effort on nonessential activities

# Developing Budgets

- Time-Phased Budgets

- A cost estimate is not a budget unless it is time-phased.

- Time phasing begins with the time estimate for a project.
    - Time-phased budgets mirror how the project's cash needs (costs) will occur or when cash flows from the project can be expected.
    - Budget variances occur when actual and forecast events do not coincide.

# Work Package Estimates

WP Description Final version

Page 1 of 1

WP ID 1.1.3.2

Project PC Proto

Deliverable Circuit board

Date 9/29/XX

Original Unit Software

Estimator RMG

WP Duration 3 Work Weeks

Total Budget \$ 265

## Time-Phased Budget (\$)

Work periods

Direct costs	Rate	1	2	3	4	5	Total
Code	\$ XX/hr	50	30	20			\$100
Document	\$ XX/hr		10	15			25
Publish	\$ XX/hr			5			5
<b>Total labor</b>		50	40	40			\$130
Materials			20				20
Equipment	\$ XX/hr	50	15	50			115
Other _____							
<b>Total direct</b>		100	75	90			\$265

FIGURE 5.4

# Three Views of Cost

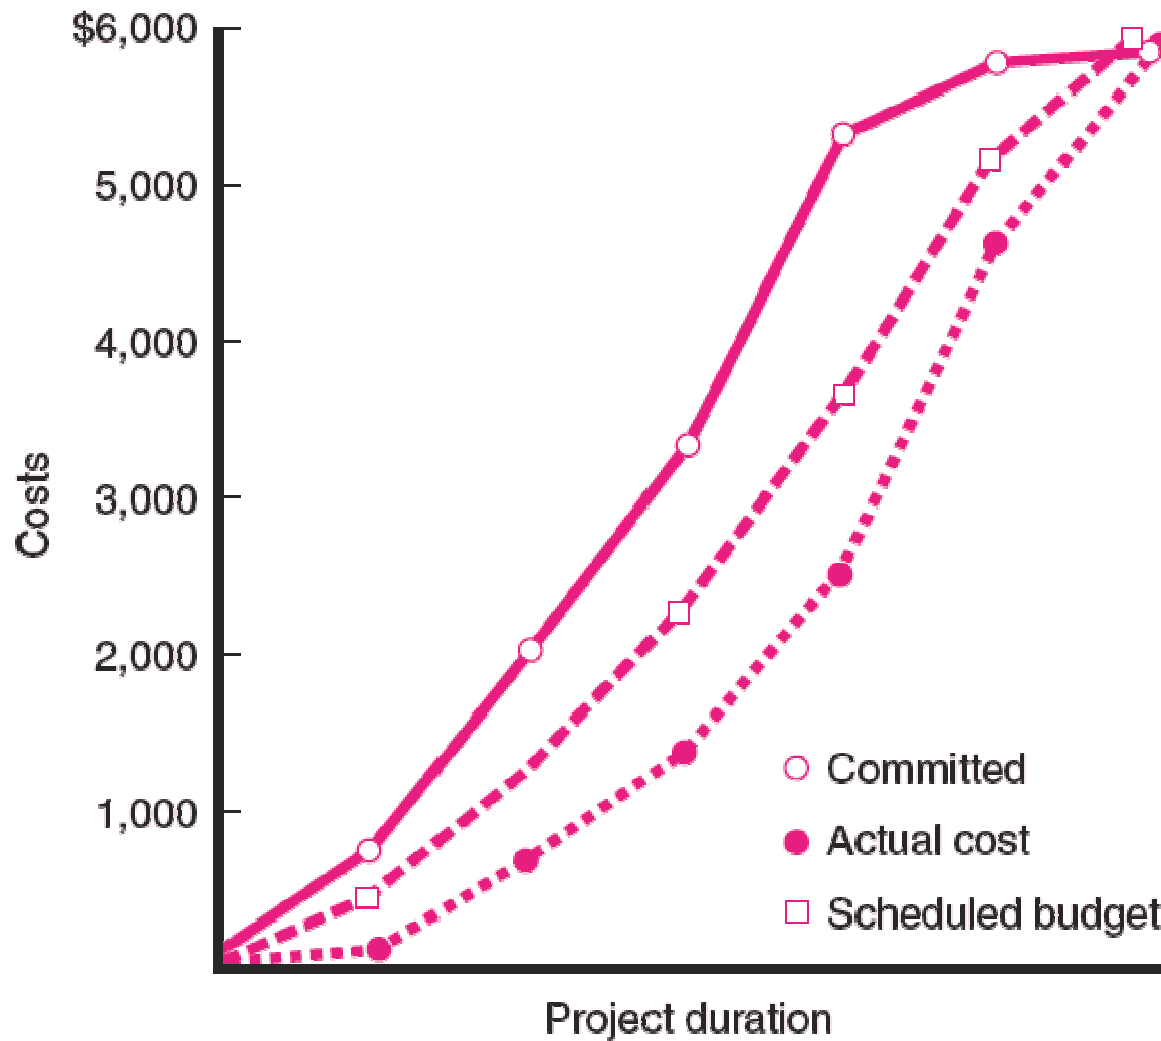

FIGURE 5.5

# Types of Costs

- Direct Costs
  - Costs that are clearly chargeable to a specific work package.
    - Labor, materials, equipment, and other
- Direct (Project) Overhead Costs
  - Costs incurred that are directly tied to an identifiable project deliverable or work package.
    - Salary, rents, supplies, specialized machinery
- General and Administrative Overhead Costs
  - Organization costs indirectly linked to a specific package that are apportioned to the project

## Contract Bid Summary Costs

Direct costs	\$80,000
Direct overhead	\$20,000
G&A overhead (20%)	\$20,000
Profit (20%)	\$24,000
Total bid	\$144,000

**FIGURE 5.6**

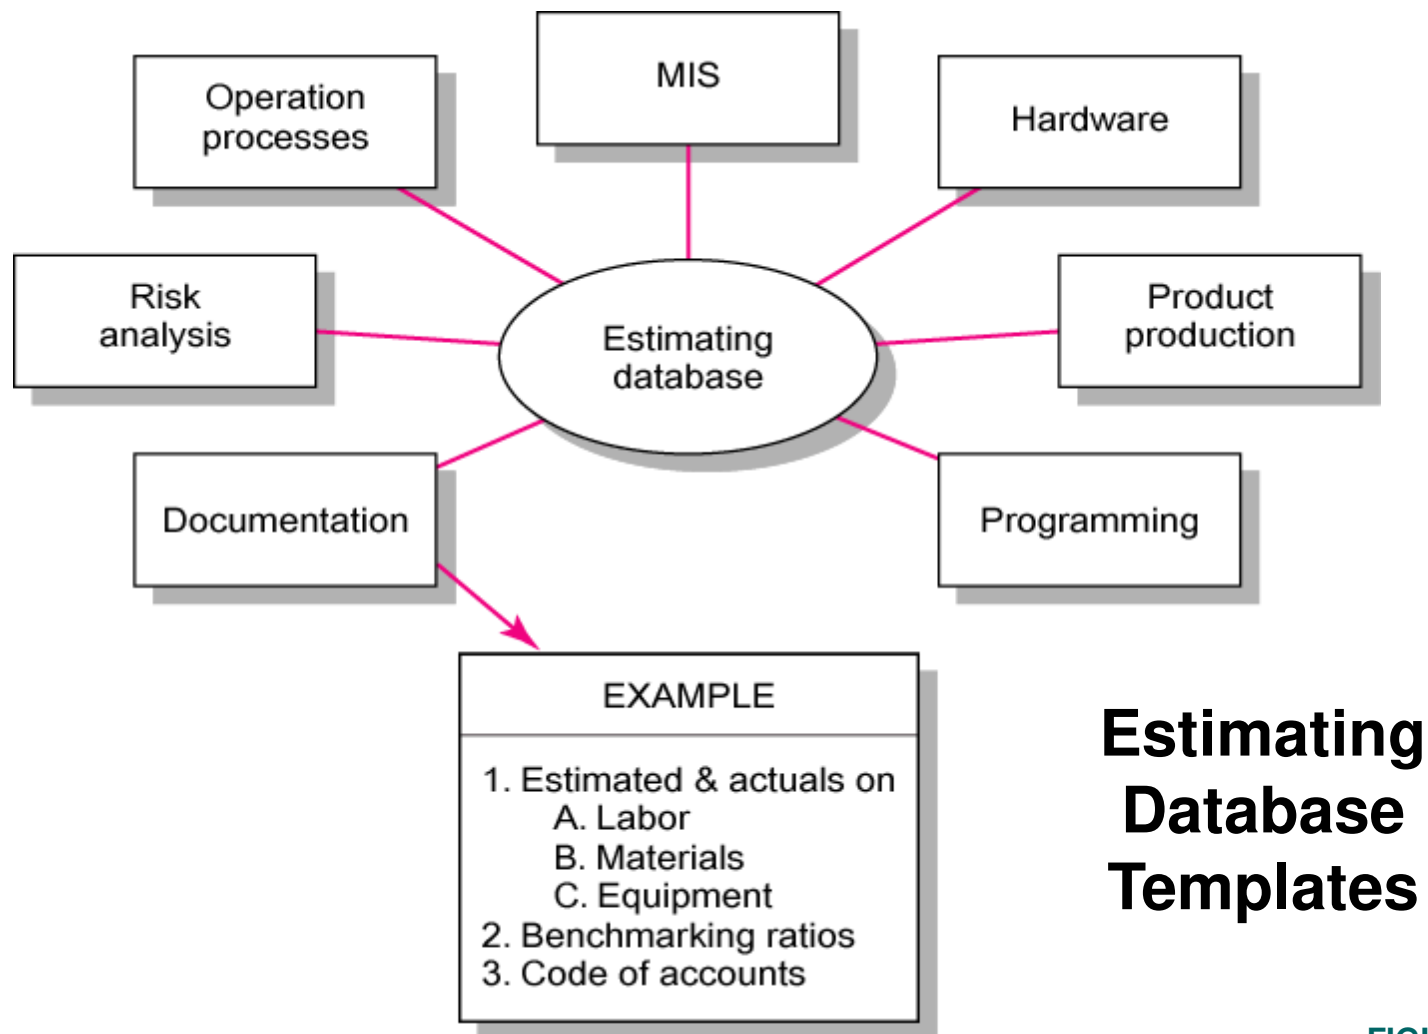

# Refining Estimates

- Reasons for Adjusting Estimates
  - Interaction costs are hidden in estimates.
  - Normal conditions do not apply.
  - Things go wrong on projects.
  - Changes in project scope and plans.
- Adjusting Estimates
  - Time and cost estimates of specific activities are adjusted as the risks, resources, and situation particulars become more clearly defined.

## Refining Estimates (cont'd)

- Contingency Funds and Time Buffers
  - Are created independently to offset uncertainty.
  - Reduce the likelihood of cost and completion time overruns for a project.
  - Can be added to the overall project or to specific activities or work packages.
  - Can be determined from previous similar projects.
- Changing Baseline Schedule and Budget
  - Unforeseen events may dictate a reformulation of the budget and schedule.
